

Prof. Luiz Paulo Lopes Fávero

Step-up Strategy

Modelo com Interceptos Aleatórios

$$desempenho_{ij} = \gamma_{00} + \gamma_{10} \cdot horas_{ij} + v_{0j} + \varepsilon_{ij}$$

Fixed effects: desempenho ~ horas

		Value	Std.Error	DF	t-value	p-value
γ_{00}	(Intercept)	4.529998	7.027459	347	0.64461	0.5196
γ_{10}	horas	1.969615	0.056201	347	35.04580	0.0000

Modelo com Interceptos e Inclinações Aleatórios

$$desempenho_{ij} = \gamma_{00} + \gamma_{10} \cdot horas_{ij} + v_{0j} + v_{1j} \cdot horas_{ij} + \varepsilon_{ij}$$

```
modelo_intercept_inclin_hlm2 <- lme(fixed = desempenho ~ horas,
  random = ~ horas | escola,
  data = estudante_escola,
  method = "REML")
```

Fixed effects: desempenho ~ horas

	Value	Std.Error	DF	t-value	p-value
γ_{00} (Intercept)	7.120545	2.4254358	347	2.935780	0.0035
γ_{10} horas	1.894527	0.3076295	347	6.158468	0.0000

$$desempenho_{ij} = 7,12 + 1,89 \cdot horas_{ij} + v_{0j} + v_{1j} \cdot horas_{ij} + \varepsilon_{ij}$$

Handwritten annotations: "efeito escola" (pointing to the random part), "fixed" (under the fixed part), and "random" (under the random part).

Modelo Final HLM2

$$desempenho_{ij} = \gamma_{00} + \gamma_{10} \cdot horas_{ij} + \gamma_{01} \cdot texp_j + \gamma_{11} \cdot texp_j \cdot horas_{ij} + v_{0j} + v_{1j} \cdot horas_{ij} + \varepsilon_{ij}$$

```
modelo_final_hlm2 <- lme(fixed = desempenho ~ horas + texp + horas:texp,
  random = ~ horas | escola,
  data = estudante_escola,
  method = "REML")
```

Fixed effects: desempenho ~ horas + texp + horas:texp

	Value	Std.Error	DF	t-value	p-value
γ_{00} (Intercept)	-0.8495955	2.9948411	346	-0.283686	0.7768
γ_{10} horas	0.7134608	0.3206702	346	2.224905	0.0267
γ_{01} texp	1.5852559	0.4863036	8	3.259807	0.0115
γ_{11} horas:texp	0.2318290	0.0526263	346	4.405190	0.0000

$$desempenho_{ij} = -0,85 + 0,713 \cdot horas_{ij} + 1,585 \cdot texp_j + 0,23 \cdot texp_j \cdot horas_{ij} + v_{0j} + v_{1j} \cdot horas_{ij} + \varepsilon_{ij}$$

$$desempenho_{ij} = \underbrace{-0,84 + 0,713 \text{ horas}_{ij} + 1,585 \text{ texp}_j + 0,23 \text{ texp}_j \cdot \text{horas}_{ij}}_{\text{fixed}} + \underbrace{\gamma_{0j} + \nu_{1j} \cdot \text{horas}_{ij}}_{\text{escola}} + \varepsilon_{ij}$$

Handwritten annotations: The fixed effects part is bracketed in red and labeled 'fixed'. The random effects part is bracketed in red and labeled 'escola'. The intercept -0,84 is crossed out and replaced with -0,21. The coefficient 0,713 is crossed out and replaced with 0,4388. The coefficient 1,585 is crossed out and replaced with 3,6. The coefficient 0,23 is crossed out and replaced with 11. The error term ε_{ij} is crossed out and replaced with 11.

Modelo Nulo

$$desempenho_{tjk} = \underbrace{\delta_{000}}_{\text{Efixo}} + \underbrace{\nu_{0jk} + \tau_{00k} + \varepsilon_{tjk}}_{\text{Aleat.}}$$

```
modelo_nulo_hlm3 <- lme(fixed = desempenho ~ 1,
  random = list(escola = ~1, estudante = ~1),
  data = tempo_estudante_escola,
  method = "REML")
```

Fixed effects: desempenho ~ 1

	Value	Std.Error	DF	t-value	p-value
δ_{000} (Intercept)	68.71395	3.553153	1830	19.33887	0

$$desempenho_{tjk} = 68,71 + \nu_{0jk} + \tau_{00k} + \varepsilon_{tjk}$$

Modelo de Tendência Linear com Interceptos e Inclinações Aleatórios

$$desempenho_{ijk} = \delta_{000} + \delta_{100}.mes_{jk} + \underbrace{v_{0jk} + v_{1jk}.mes_{jk}} + \underbrace{\tau_{00k} + \tau_{10k}.mes_{jk}} + \varepsilon_{ijk}$$

```
modelo_intercept_inclin_hlm3 <- lme(fixed = desempenho ~ mes,
  random = list(escola = ~mes, estudante = ~mes),
  data = tempo_estudante_escola,
  method = "REML")
```

Fixed effects: desempenho ~ mes

		Value	Std.Error	DF	t-value	p-value
δ_{000}	(Intercept)	57.85612	3.968659	1829	14.57825	0
δ_{100}	mes	4.33651	0.209849	1829	20.66488	0

$$desempenho_{ijk} = 57,86 + 4,33.mes_{jk} + v_{0jk} + v_{1jk}.mes_{jk} + \tau_{00k} + \tau_{10k}.mes_{jk} + \varepsilon_{ijk}$$

Modelo de Tendência Linear com Interceptos e Inclinações Aleatórios e as Variáveis *ativ* de Nível 2 e *texp* de Nível 3 (Modelo Completo)

$$desempenho_{ijk} = \delta_{000} + \delta_{100}.mes_{jk} + \delta_{010}.ativ_{jk} + \delta_{001}.texp_k + \delta_{110}.ativ_{jk}.mes_{jk} + \delta_{101}.texp_k.mes_{jk} + \underbrace{v_{0jk} + v_{1jk}.mes_{jk}} + \underbrace{\tau_{00k} + \tau_{10k}.mes_{jk}} + \varepsilon_{ijk}$$

```
modelo_completo_hlm3 <- lme(fixed = desempenho ~ mes + ativ + texp +
  ativ:mes + texp:mes,
  random = list(escola = ~mes, estudante = ~mes),
  data = tempo_estudante_escola,
  method = "REML")
```

Fixed effects: desempenho ~ mes + ativ + texp + ativ:mes + texp:mes

		Value	Std.Error	DF	t-value	p-value

Handwritten annotations on the equation:

- fixed** (red) points to the fixed effects terms: $40,03 + 5,17 \cdot \text{mes}_{jk} + 14,70 \cdot \text{ativ}_{jk} + 1,18 \cdot \text{texp}_k - 0,65 \cdot \text{ativ}_{jk} \cdot \text{mes}_{jk} - 0,56 \cdot \text{texp}_k \cdot \text{mes}_{jk}$.
- estudante** (blue) points to the random effects terms: $v_{0jk} + v_{1jk} \cdot \text{mes}_{jk} + \tau_{00k} + \tau_{10k} \cdot \text{mes}_{jk}$.
- resíduo** (pink) points to the error term: ε_{tjk} .
- Handwritten values below the equation: $-8,67$, $0,319$, $-2,182$, and $-0,119$.
